

Department of Computer Science Institute for System Architecture, Chair for Computer Networks

Application Development for Mobile and Ubiquitous Computing

Seminar Task 3 First Presentation

GroupNo. 9 Team: Aleksandra Parol, Rafał Majorczyk

Our mobile application offers you the following features for managing university career:

Enroll for various lectures, such as exercise courses, seminars, practical courses etc. Check your personal timetable showing all your lectures you are enrolled to.

How does it work so far:

- Iogs in with university e-mail and password
- Enters the URL of the server
- Syncronize with database
- Look up throught the list of owned courses on given semester
- possibility to add/remove course
- display details of subject

Microsfot .NET Compact Framework

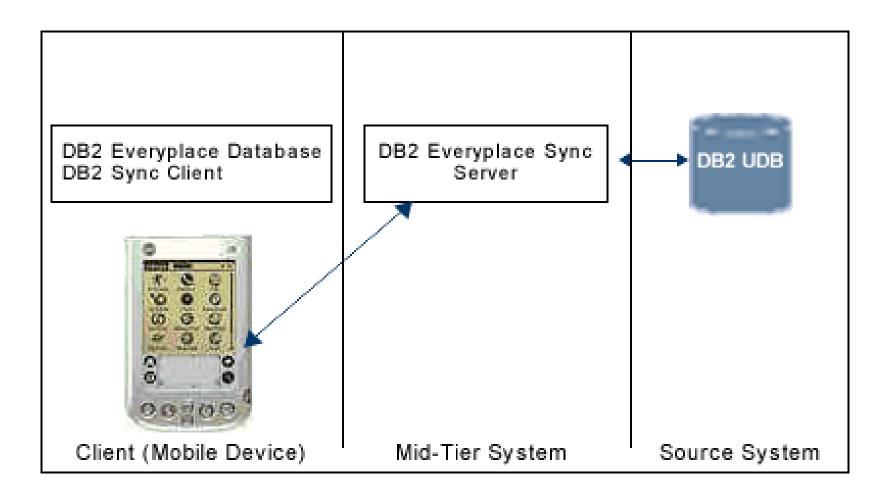

IBM DB2 Everyplace v9

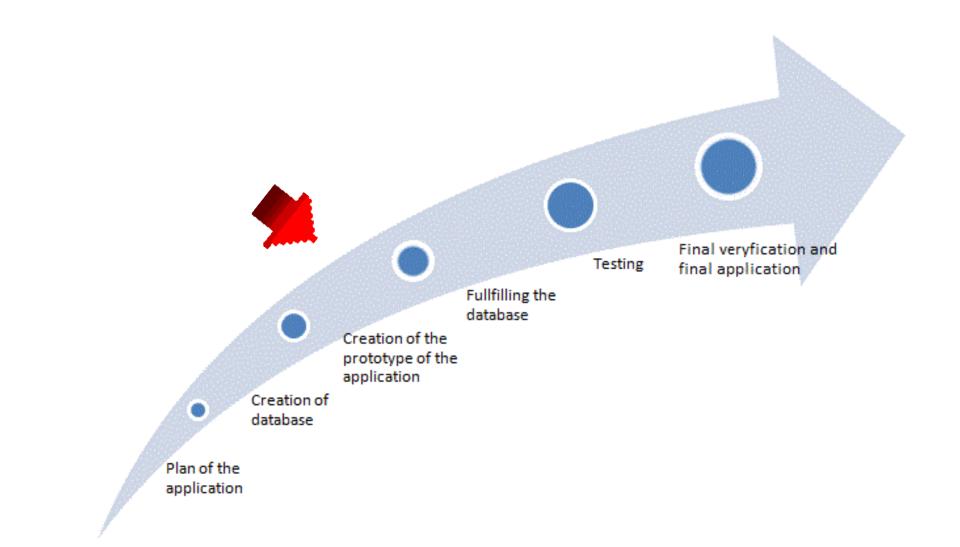

- Privacy:
 - only student is able to manage his timetable via his account
- Disconnections:
 - synchronization with other clients
- Synchronization (Client):
 - courses in offer (Add/Delete)
 - sign in for course -> takes one place from the list
 - sign out from the course ->returns one place to the list
 - when the list is full subject is not available
- Our challenges:
 - Know and better understand enviroment of .Net compact framework and IBM DB2
 - check its usability on mobile devices

Thank you for your attention!
