

Application Development for Mobile and Ubiquitous Computing

Whiteboard Second Presentation

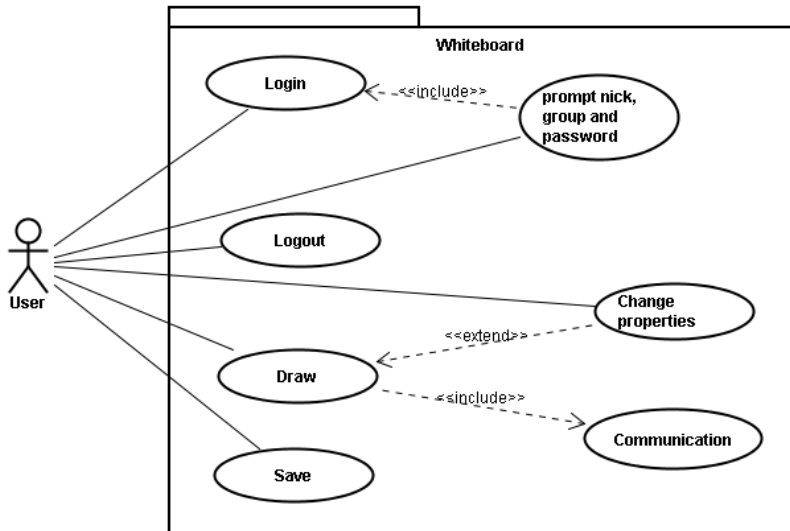

Group 14: Wolfgang Hönig, Frank Tetzl

12/18/2009

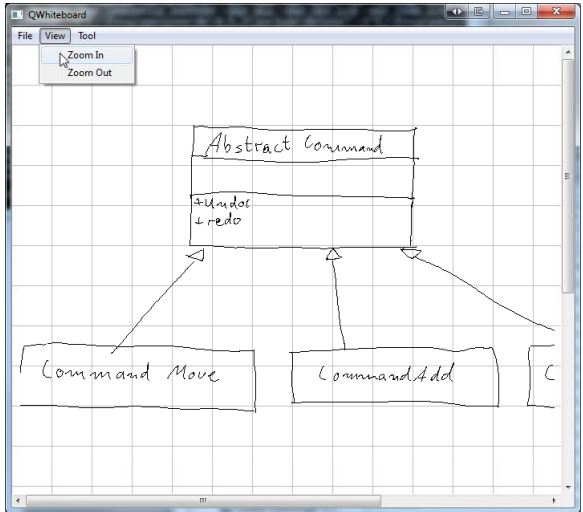

Application Scenario

- Whiteboard with vector graphics support
 - share and/or save quick notes, sketches
 - distributed meetings
 - e-learning
- useable with wide range of devices
 - normal PC (Windows, Linux)
 - Tablet PC (Windows, Linux)
 - Laptop, Netbook
 - PDA (Windows Mobile)

Use-Cases

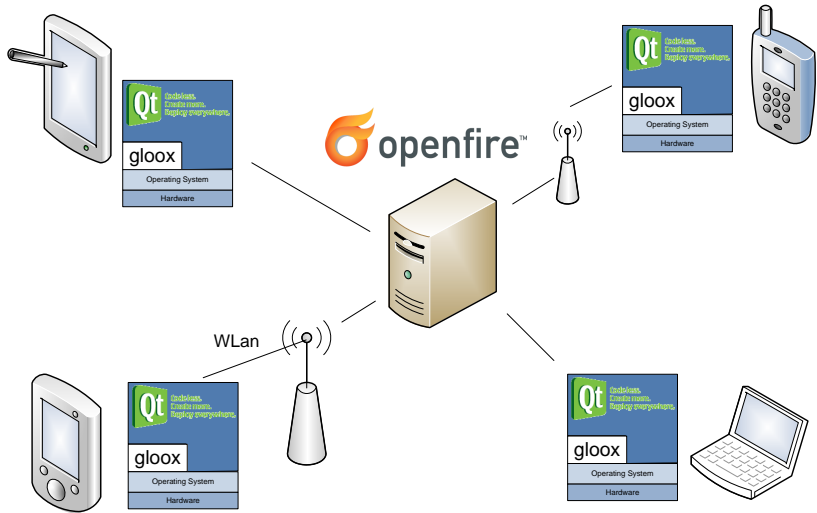

Mockup

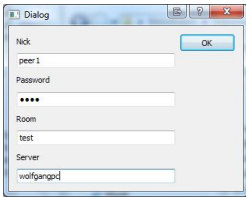

Technologies

- Qt
 - cross platform C++ library
 - Used Frameworks: GraphicsView, Undo-Framework
- JXTA-C
 - Problems connecting multiple peers with each other
 - small and mostly outdated documentation
 - currently not under active development
- XMPP/Jabber
 - Extensible Messaging and Presence Protocol
 - Client: gloox
 - ANSI C++
 - Server: OpenFire
 - real time collaboration (RTC) server
 - Java

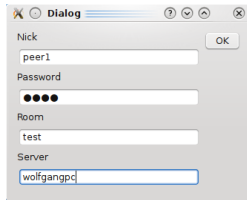

Simple Multiuser Chat

A screenshot of a Windows-style dialog box titled "Dialog". It contains several input fields: "Nick" (with an "OK" button), "peer1", "Password" (masked with "****"), "Room" (with "test"), and "Server" (with "wolfgangpc").

Windows

A screenshot of a Linux-style dialog box titled "Dialog". It contains several input fields: "Nick" (with an "OK" button), "peer1", "Password" (masked with "****"), "Room" (with "test"), and "Server" (with "wolfgangpc").

Linux

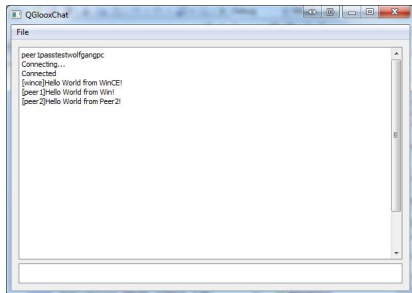

Windows Mobile

Due to Qt. . .

. . . all sharing the same source code!

Simple Multiuser Chat

Windows

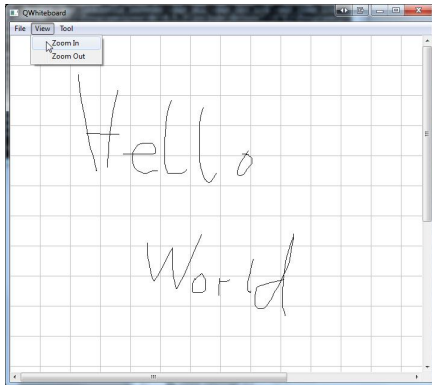

Windows Mobile

Due to Qt. . .

. . . all sharing the same source code!

Singleuser Whiteboard

Windows

Windows Mobile

Due to Qt...

... all sharing the same source code!

Challenges

- different screen sizes
⇒ vector graphics in QGraphicsView
- Heterogeneity
⇒ only crossplatform libraries, e.g. gloox, Qt
- Bandwidth, Latency
⇒ compress messages with zlib or similar
- Disconnections, Consistency
⇒ OpenFire saves history, reconnect gets current state

Work plan

Done

- 1 port ~~jxta-c~~ to Windows Mobile
- 2 built a simple chat prototyp (multiuser chat application with gloox and Qt)
- 3 built a single-user whiteboard with Qt

To Do

extend whiteboard with collaboration capabilities
