- Summary

- Recognition of a type of a mushroom (edible or poisonous).
- Mushroom's picture analysis for gathering its information.
- Printing a list of possible mushrooms with option to see their details.
- Updating data of mushroom.

symbian OS

Symbian OS - one of
Nokia's mobile operating
systems for mobile
devices and smartphones,

with associated libraries, user interface, frameworks and
reference implementations of common tools.

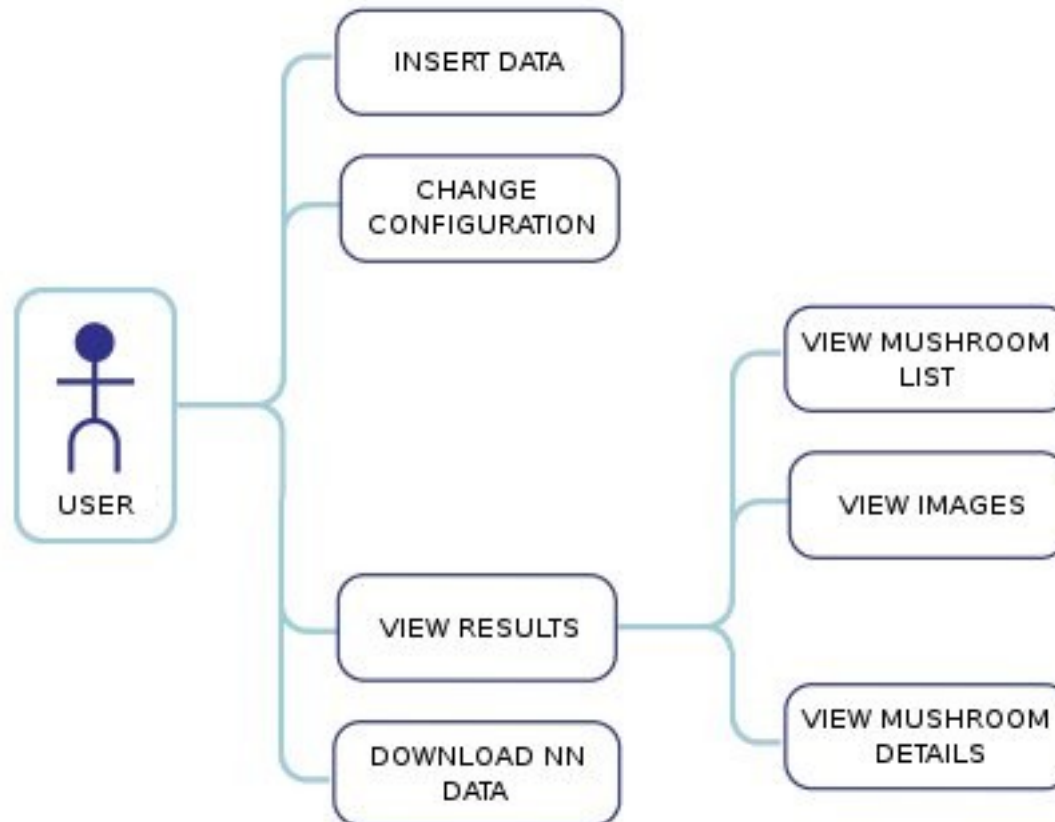

Artificial neural network

(ANN) - a mathematical model or computational model that is inspired by the structure and/or functional aspects of biological neural networks. A neural network consists of an

an interconnected group of artificial neurons, and it processes information using a connectionist approach to computation.

- Solutions
- Summary

- Achieve neural network's high effectiveness.
- Recognize as much objects parameters as possible (from the picture)
[some parameters can be added only by user, e.g. odor]
- Energy consumption (GPS, pictures).

- Summary

Achieve neural network's high effectiveness.

- Good results for edible / poisonous network

Achieve neural network's high effectiveness.

- Good results for edible / poisonous network

Achieve neural network's high effectiveness.

- Good results for edible / poisonous network

Achieve neural network's high effectiveness.

- Even better effectiveness has network detecting concrete Mushroom

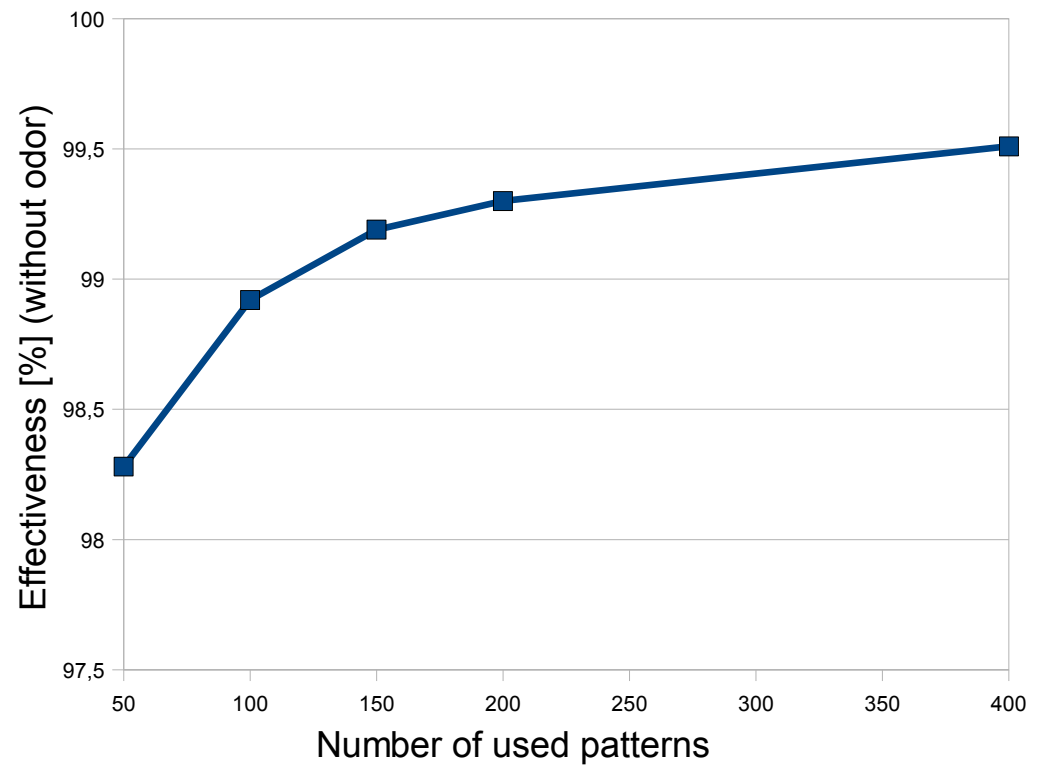

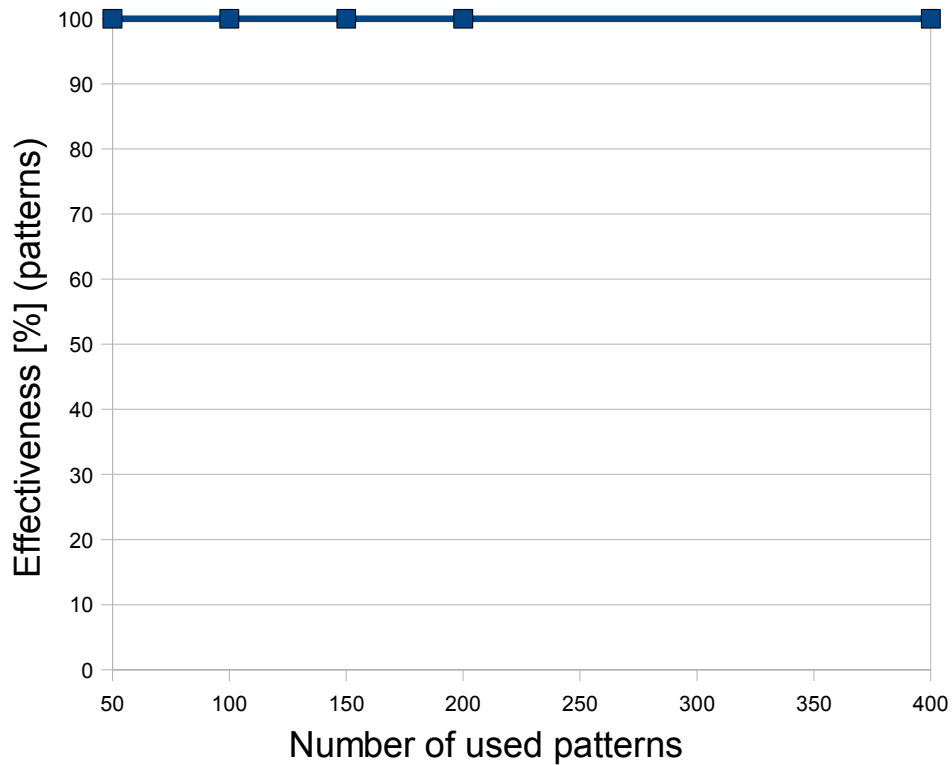

Achieve neural network's high effectiveness.

- Even better effectiveness has network detecting concrete Mushroom

Achieve neural network's high effectiveness.

- Even better effectiveness has network detecting concrete Mushroom

Energy consumption (GPS, pictures).

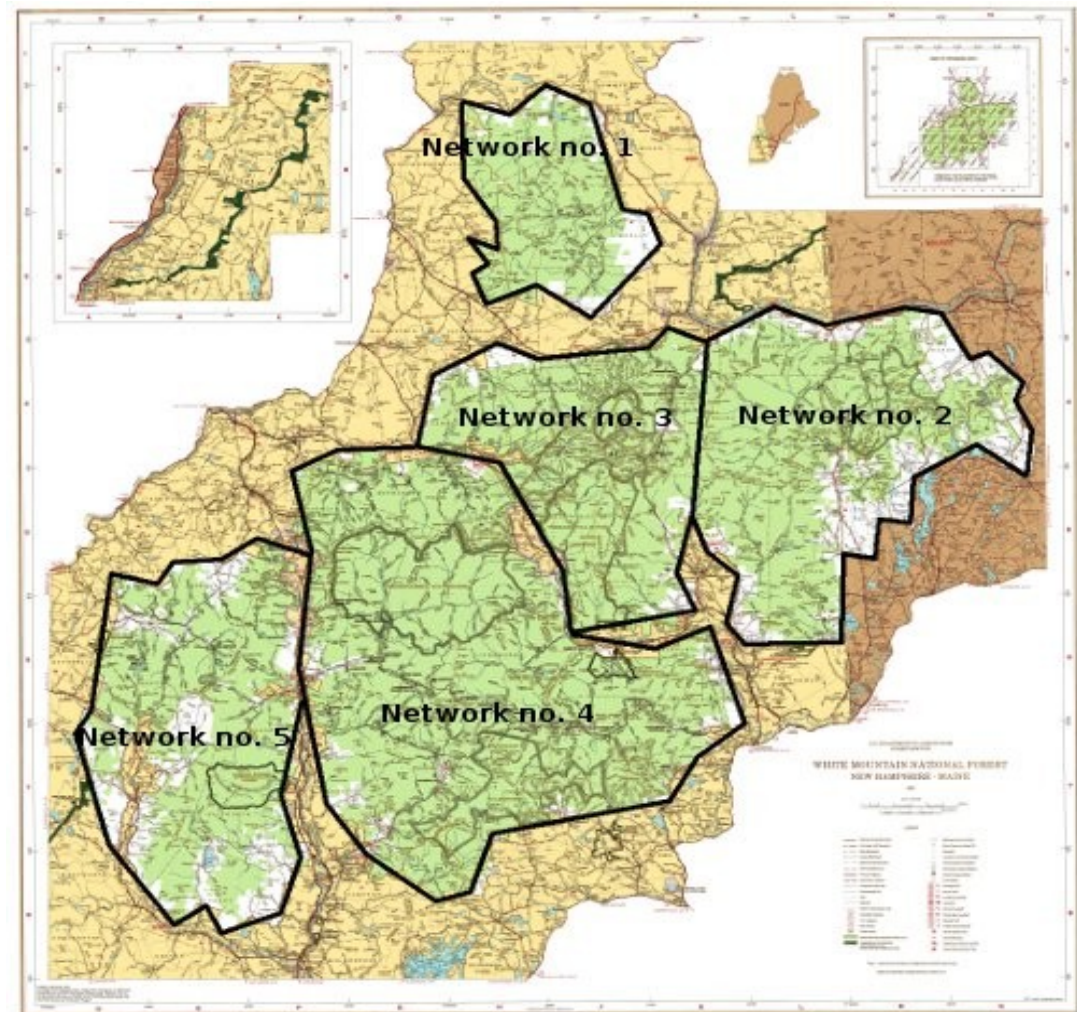

- Reading GPS data is important for finding NN of user's location area.

Energy consumption (GPS, pictures).

- Reading GPS data is important for finding NN of user's location area.
- Checking if NN is out of date, before each recognition consumes a lot of resources

Energy consumption (GPS, pictures).

- Maps are divided into several parts with separate NN.

Energy consumption (GPS, pictures).

- In each case, user is in some distance from the current part's border.

Energy consumption (GPS, pictures).

- In each case, user is in some distance from the current part's border.
- This knowledge can be used to prevent the unnecessary GPS reads.

Energy consumption (GPS, pictures).

- In each case, user is in some distance from the current part's border.
- This knowledge can be used to prevent the unnecessary GPS reads.
- Basic calculations can provide probable time of border cross by user (need to reload NN)
