

Application Development for Mobile and Ubiquitous Computing

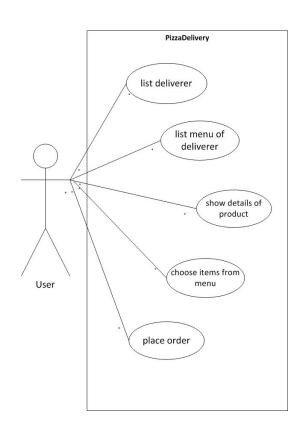

Seminar Task First Presentation

GroupNo.3 Team: Thomas Walther & Gregor Weimann

- order Pizza from different delivery services
- customer can choose delivery service that fits him
- can order from the Menu of the delivery service
- ability to plate his own pizza in GUI
- delivery service can send pizza to GPS coordinates or at predefined location
- system shows time till pizza should be delivered
- maybe mobile payment

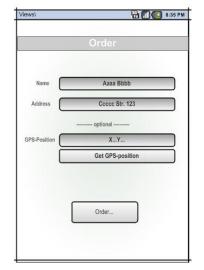

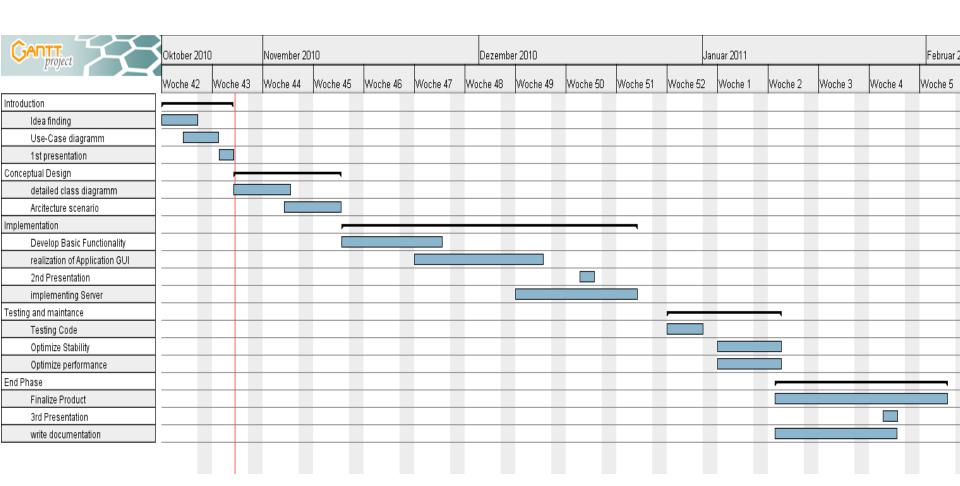

- server
 - MySQL database
 - Web Services (SOA) with Apache Axis
 - runtime environment using Apache Tomcat
- client
 - Android 2.1
- connection via GPRS/UMTS/WLAN

- bandwith limitations
 - send all needed data to the mobile device
 - o cache on phone
 - o update only if needed
 - downscale images to reduce data volume
 - use thumbnails to preview
- usabilty
 - drag and drop ingredients on the Pizza with native gestures
 - adopt GUI to small screen
- device challenges
 - limitation of ressources
 - · process recieved data in time

Work plan

- intend to use Client/Server architecture
 - access server trough Web Service using SOAP
 - need a database to hold our data
 - client runs on mobile device with android operating system
