

# Application Development for Mobile and Ubiquitous Computing

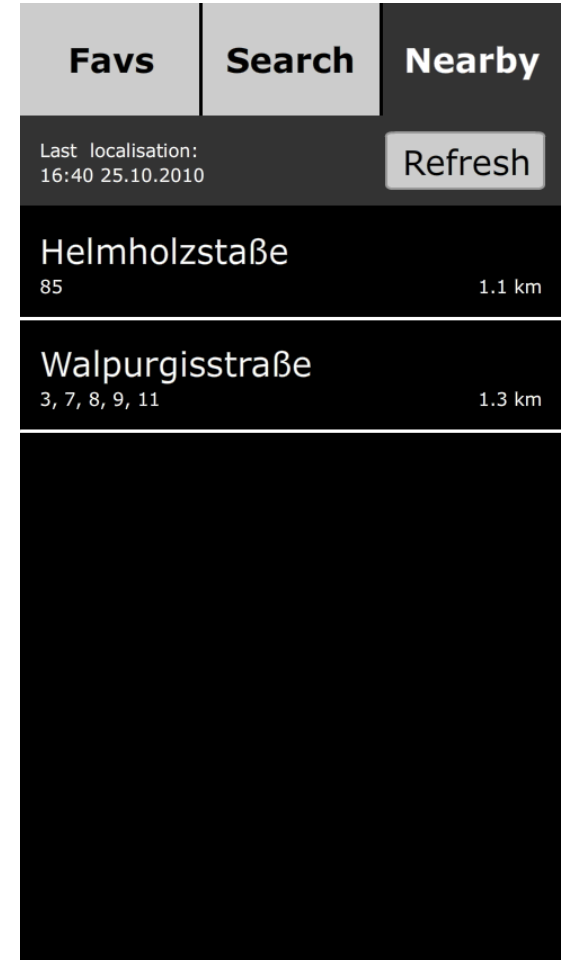

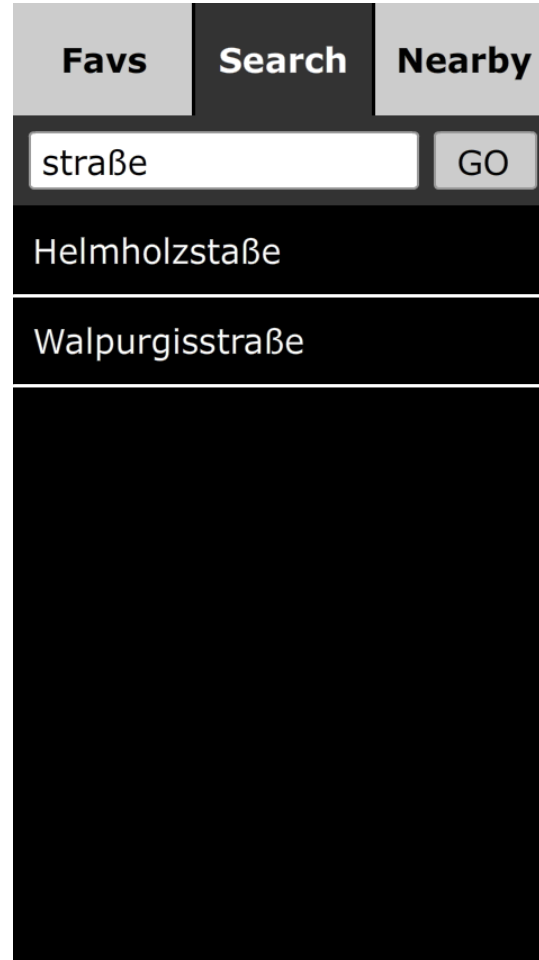

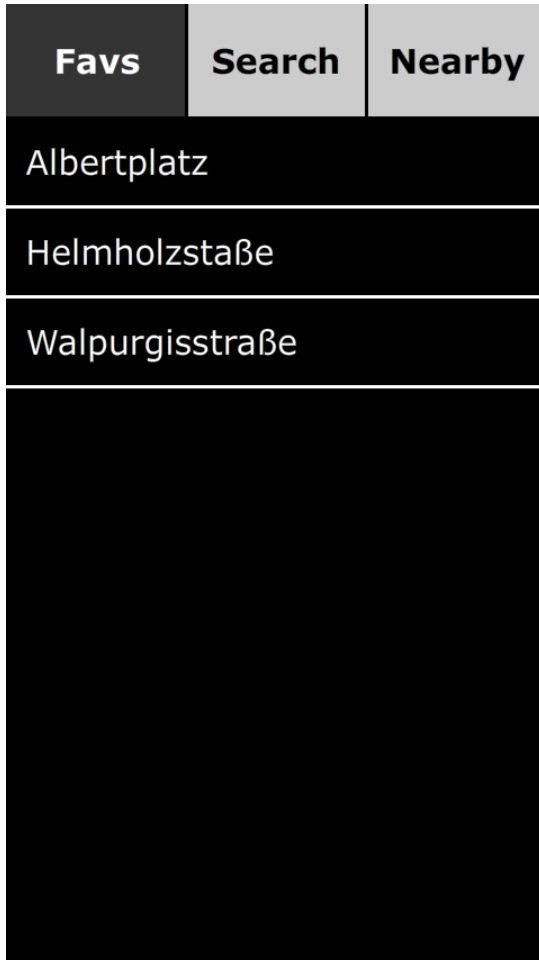

## DVB Timetable Monitor First Presentation

GroupNo. 8

Team: Marc Göbel, Thilo Gürtler

- Get information about next departures of transportation vehicles (busses, trams, trains) for any DVB station
  - Search for stations via text input
  - Get nearby stations for current position
  - Save favourite stations for quick select
- Get information about how much time a user need to get to the selected station
- Get information about how long the distance to the selected station is
- The user can navigate from his current position to the selected station with a navigation application (e.g. Google Maps)

OS: Android

Application Ports:

- Intern:
  - Get current location (GPS, Wireless Location)
  
- External:
  - DVB live data for departure times
  - DVB live data for all available station names
  - Location data for stations
  - Google Maps for navigation and distance calculation

- Real time
  - Request/Response Delays
  - Network bandwidth
  
- Usability
  - Quick station selection
  - Easy to use
  
- OS compatibility
  - Android Version as low as possible

- 13.12.2010 First prototype
- 17.12.2010 Second presentation
- 17.01.2011 Final version
- 26.01.2011 Bug fixing and improvements
- 28.01.2011 Final presentation
