

Application Development for Mobile and Ubiquitous Computing

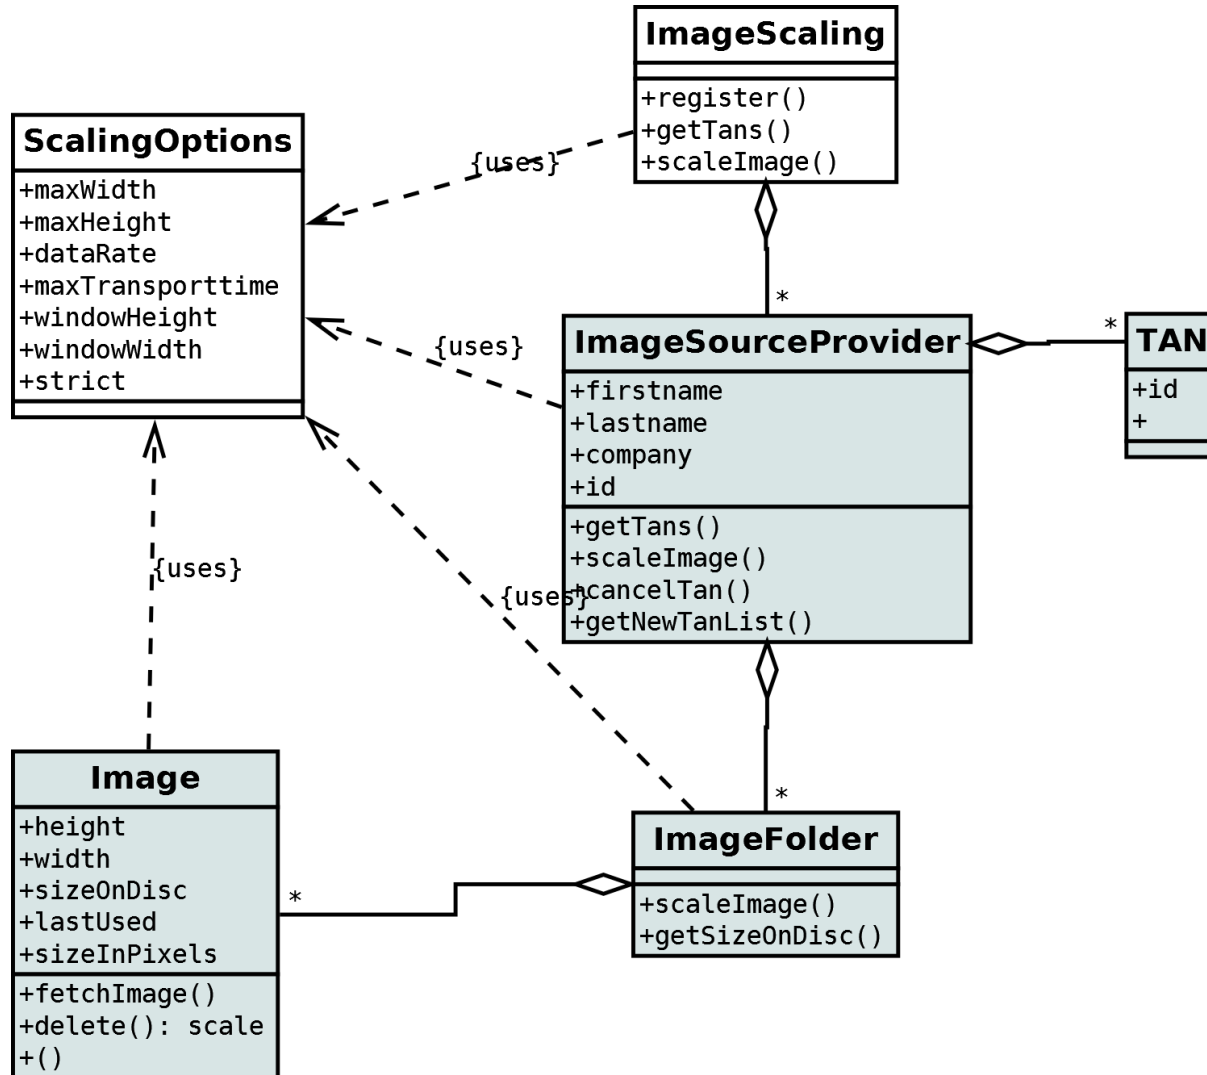

Image Scaling Web Service 2nd Presentation

Benjamin Vetter, Reik Müller

- We build a web service for providing an easy to use image scaling tool for web applications.
- The basic idea is to design a reusable component accessible and configurable both by rather simple front-end technologies as HTML and modern ones like RIAs using SOAP to retrieve data.

Apache Tomcat

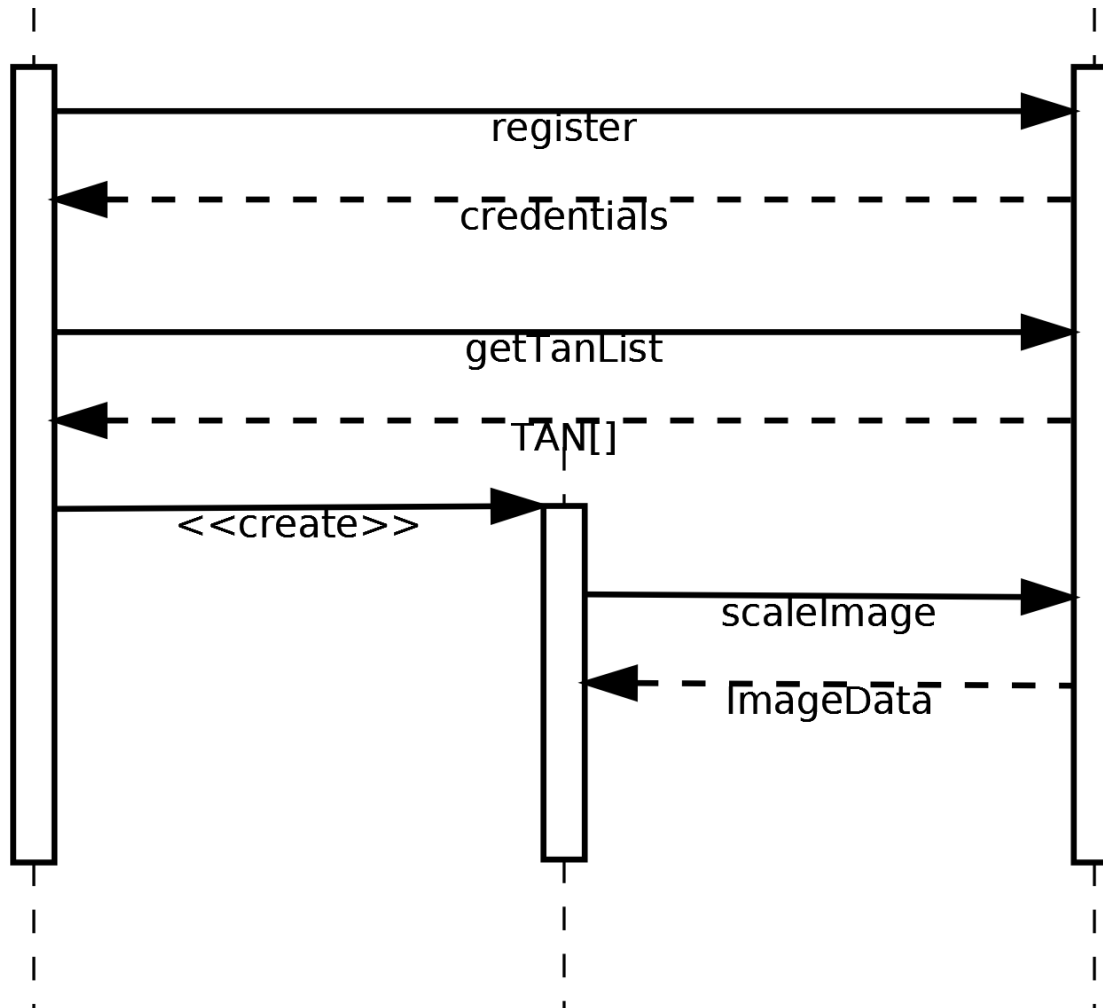

Page Provider

Web Page e.g. HTML

Image Service

- Solve a problem with the JPA
- HTTP-Servlet
- Timer-Task to delete not used Images
- Test environment

- Problems to connect SOAP- and Servlet-approach
- Operations on the file-system produce inconsistency but this will probably corrected by the system itself
- TAN-process maybe not useful → change a bit?
-
