

Application Development for Mobile and Ubiquitous Computing

Seminar Task: First Presentation

Group 9
Team: Sebastian Herrlich
David Apsel

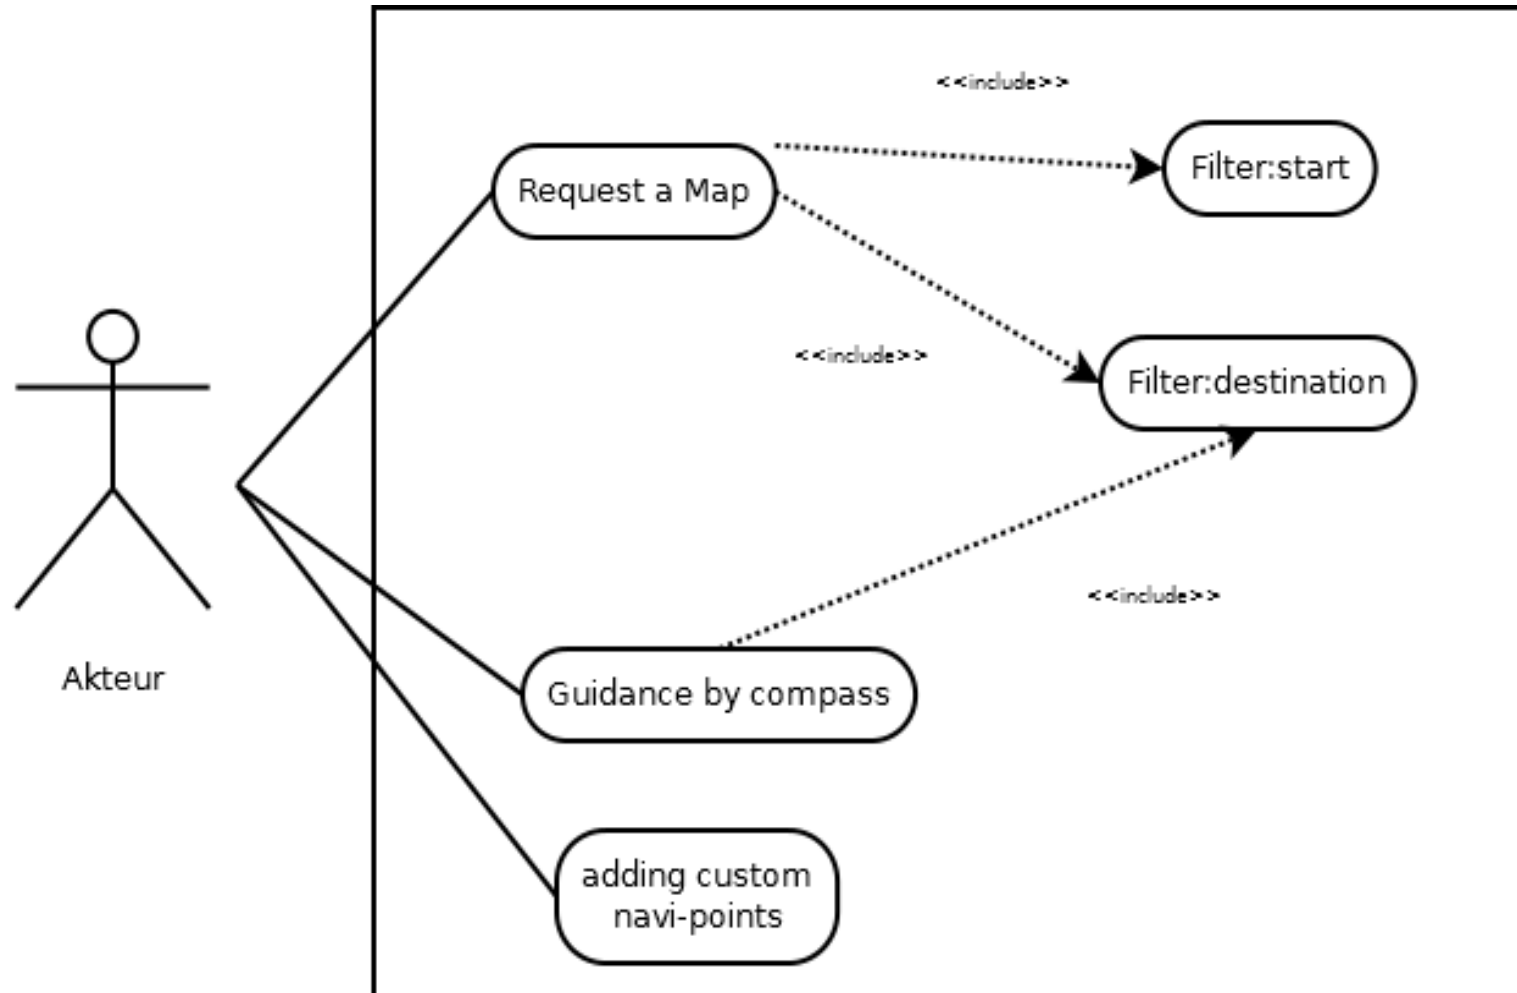

Structure

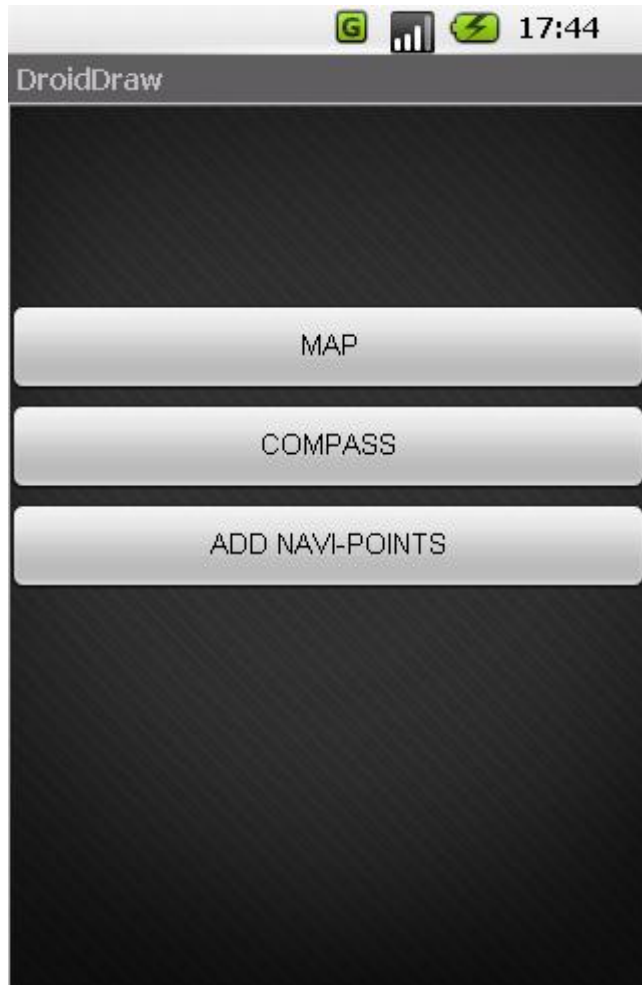

1. *Application Scenario*
2. *Technologies*
3. *Challenges*
4. *Workplan*

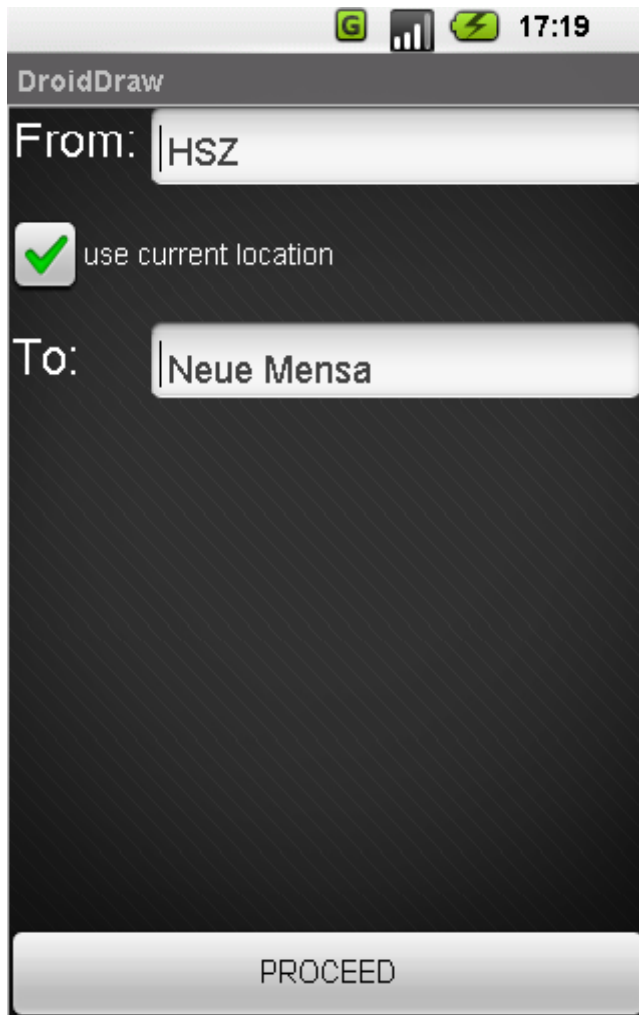

"FreshMenNavigator"

- **idea:** navigator supporting a freshman
 - user friendly
 - intuitive, simple
 - minimized GUI

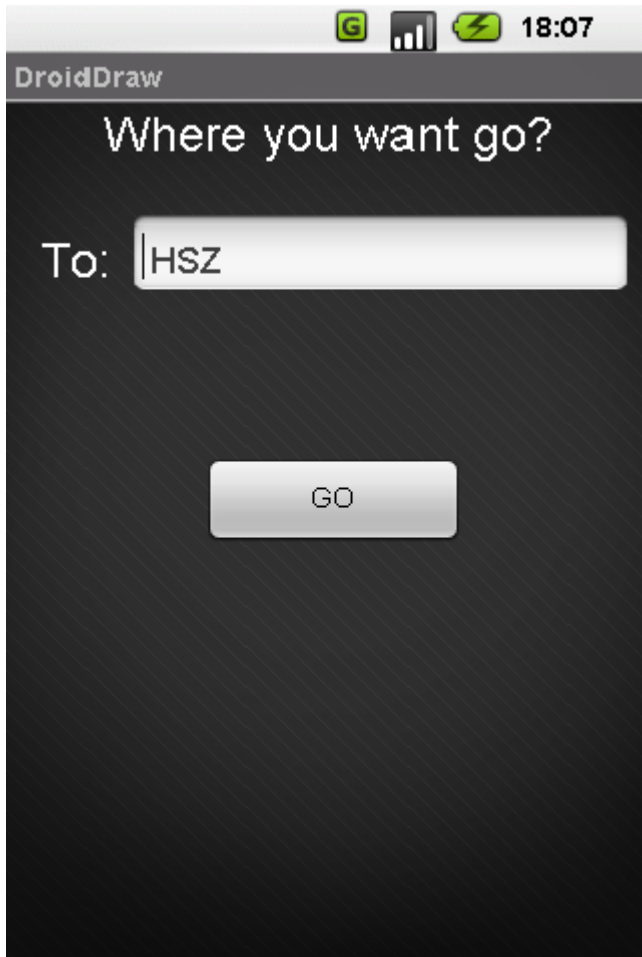

1d. Application Scenario

1e. Application Scenario

- android platform 2.3 Level 10
- IDE: Eclipse + ADT Plugin
- GoogleMaps

- Location-Technology
 - Location-based services
 - o GPS-tracking
 - o Network-tracking

“Gingerbread”

- location-based services
- geolocation (android.location + googlemaps)
- handle energie consumption - energie aware communication
- usability: satisfy customer
 - make it easy and intuitive
 - personalization (custom navi points)

- get familiar with the android framework
- design of basic gui and "activity flow"

- add necessary functionality
 - navigation via network using GoogleMaps, path to be drawn on the map

 - GPS and compass

 - manage campus buildings

 - stabilize and optimize

- maybe add more functionality

Thank you for your attention!
