

Application Development for Mobile and Ubiquitous Computing

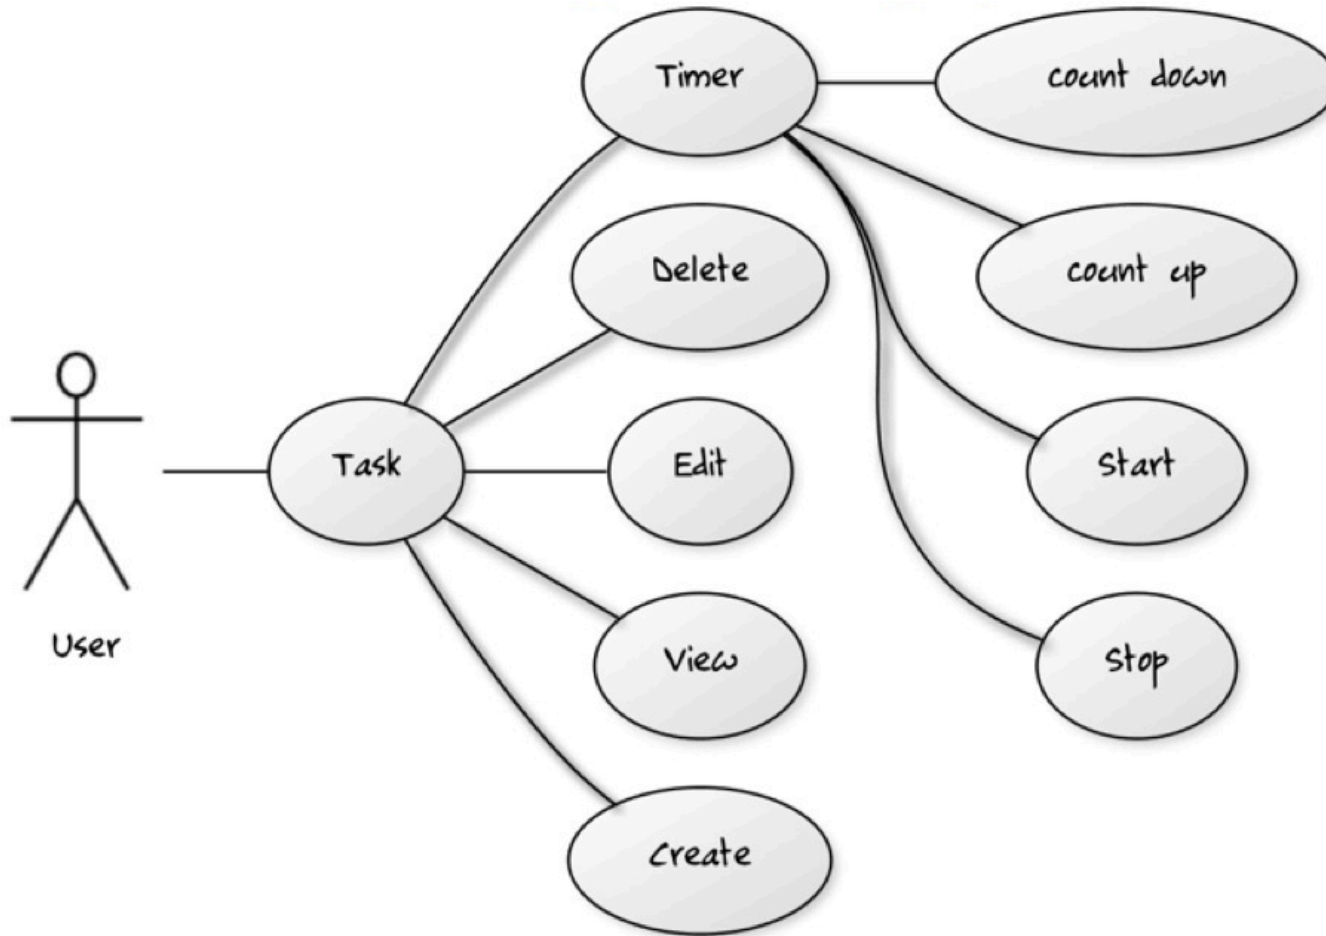

Seminar Task

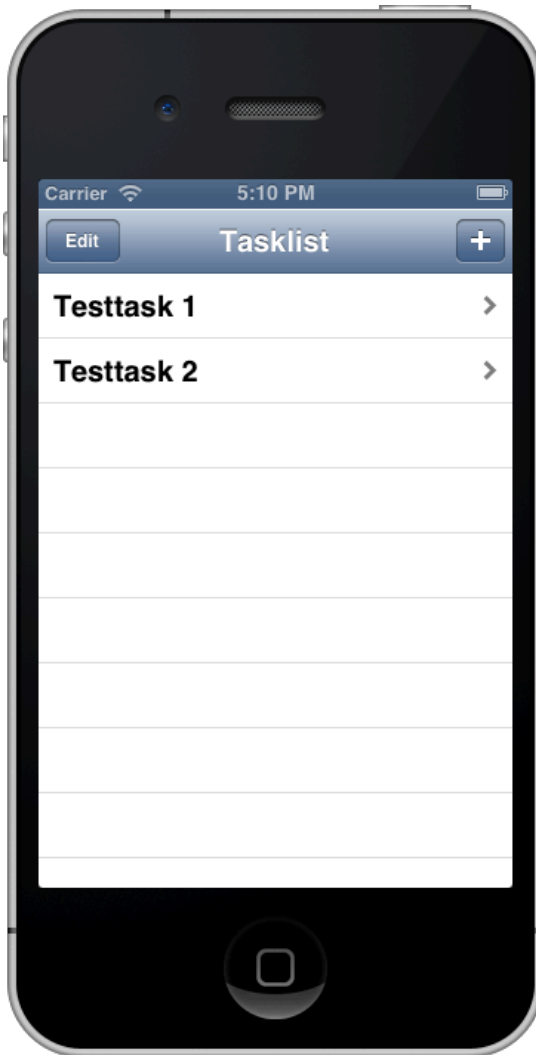

Second Presentation

GroupNo. 01

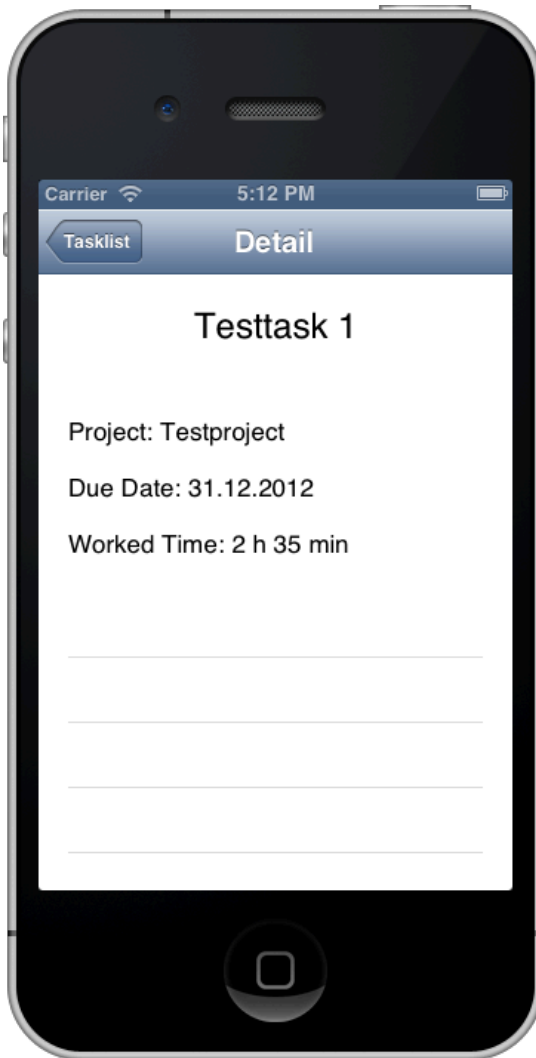

Team: Sebastian Fröstl, Christian Schäfer

- TimeChicken is an App for managing Tasks and Time
- Scenario 1: „I want an overview of my tasks.“
- Scenario 2: „I want to know how much working time I spend on a task.“
- Scenario 3: „I want to spend only a limited time working on a task.“
- Scenario 4: „I can sync TimeChicken with my Collaboration Plattform (Jira, OneSpark, ...).“

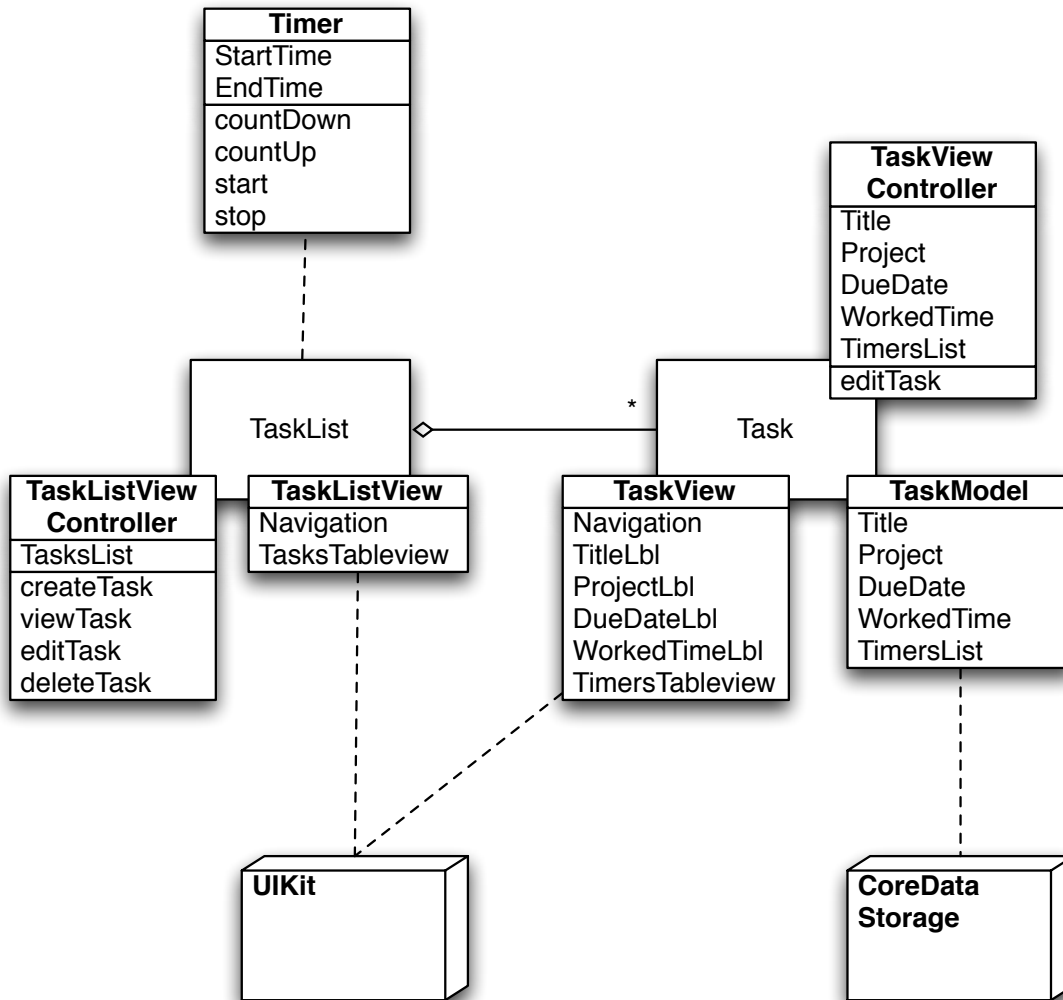

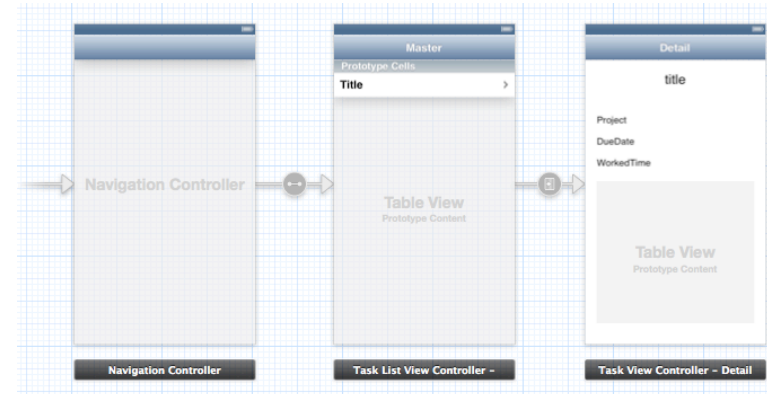

- List of all tasks
- Add new tasks
- Edit / remove tasks
- Go to detail

- Details of task with
 - Parent-project
 - Due date
 - Worked Time

- iOS 6
- CoreData Storage
- UIKit GUI
- Storyboarding for Views

- Lack of space:
 - Flat navigation (List-Detail-Pattern)
- Customer Satisfaction:
 - Easy to use (large buttons and elaborated user interface)
- Limited resources and energy:
 - Profile app and analyze with Apples tool: Instruments
 - „Push“- based network connection, not durable

- Next steps:
 - Close a task, mark as done
 - Timer, start, stop, record time slot
 - Communication and Synchronisation with REST Service
 - GUI Improvement, coloring
 - Device Testing, Profiling
