

Application Development for Mobile and Ubiquitous Computing

Seminar Task First Presentation

GroupNo. 14

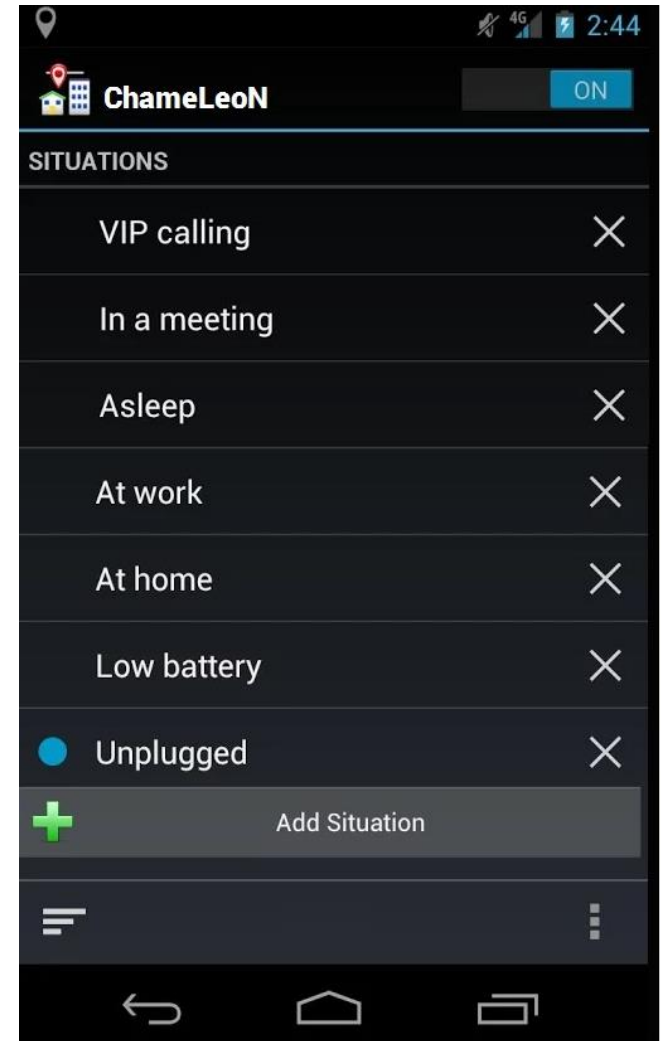

Team : Dhanya Krishnan, Sankalp Dhasmana

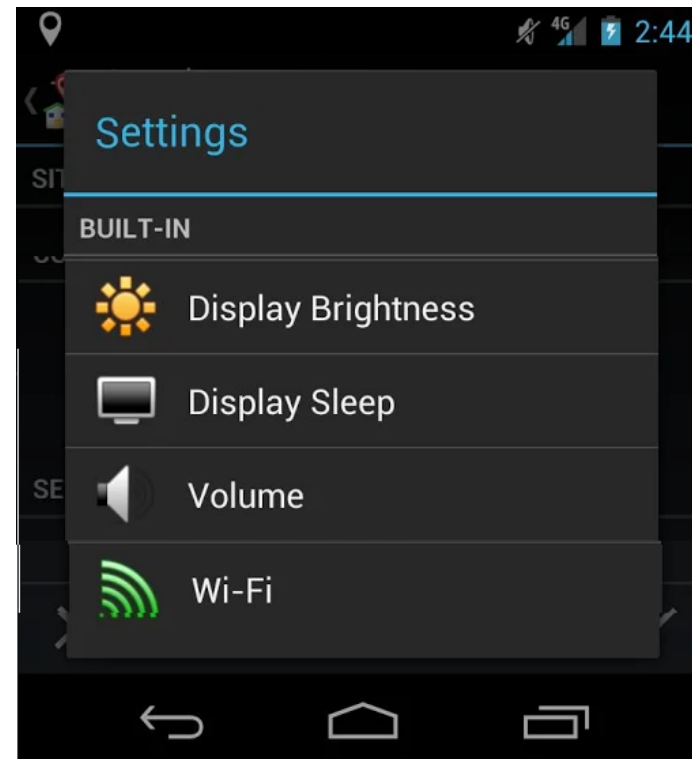

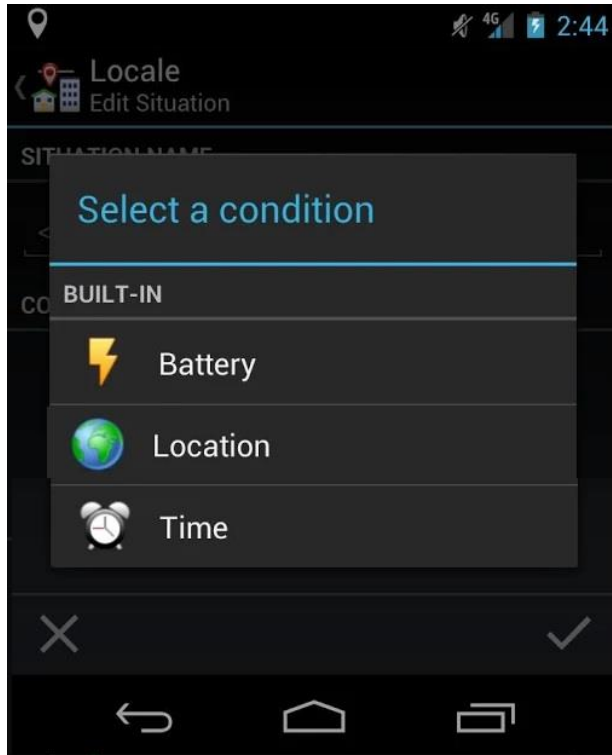

CHAMELEON

- A mobile app that automatically adjusts your phone settings according to your environment!
 - Location – switches on WiFi when you reach home
 - Time – turns Silent when you enter office/university
 - Battery – Lowers brightness/volume according to Battery level
 - etc.

- **List of default situations offered**
- **Addition of custom situations possible**

- Location services
 - GPS
 - WiFi
 - Google Maps

- Android SDK

- XML

- IDE
 - Eclipse + ADT plugin

Connectivity

- Unavailable GPS

Heterogeneous usage scenarios

- Within the location, different mode might needed

Resources

- Battery Consumption due to GPS
- Internal storage

Usability

- Unknown/Unsaved user location
- Easy of Access, Friendly User Interface

- Familiarization with Android SDK and other technologies
- Definition of core functionality (basic situations etc.)
- Prototype Development
 - Implementation of core features
 - Designing a basic GUI
- Test, Debug ,Test-again!
- Finalize implementation
- Final Documentation and Final Presentation
