Set POI

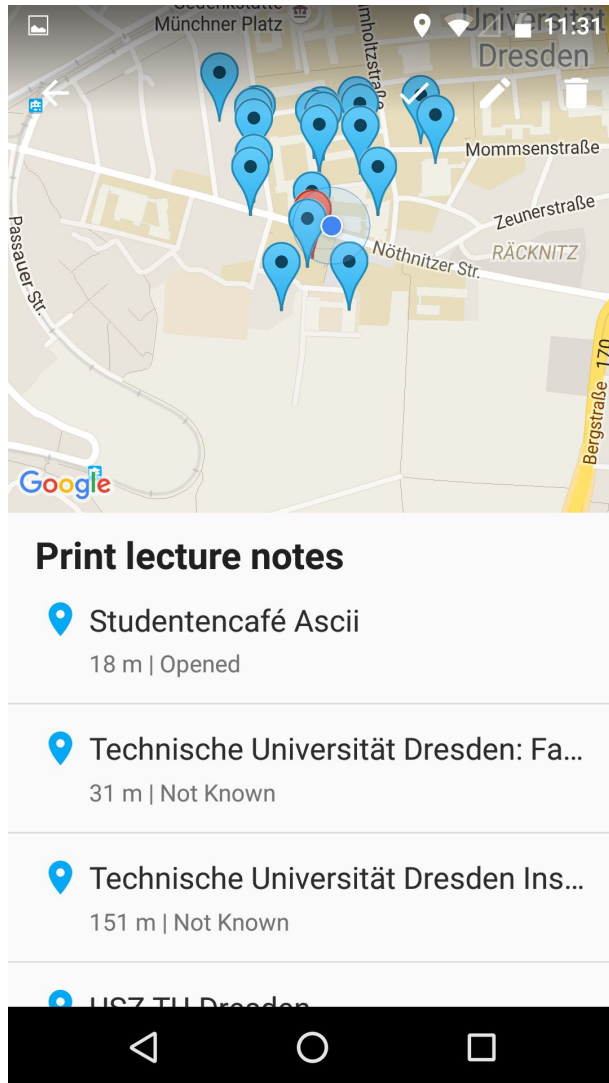

✓

This screenshot shows the 'Manage Reminder' screen with the 'automatic' location detection option selected. The 'SELECT TYPE OF POI' section is visible, and the 'Set POI' field is empty.

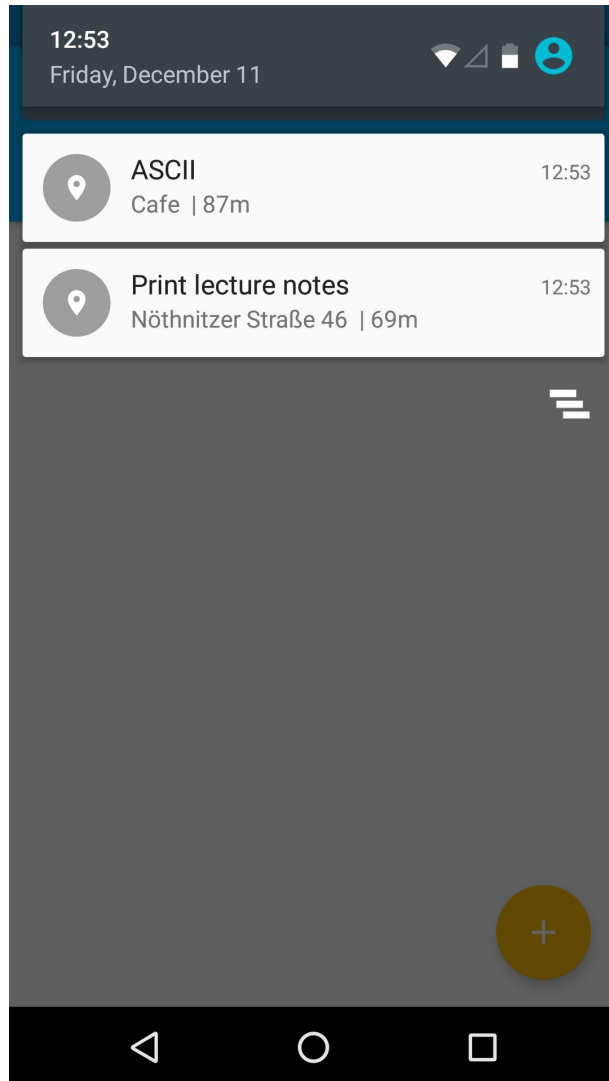

Create new reminders (active and manual)

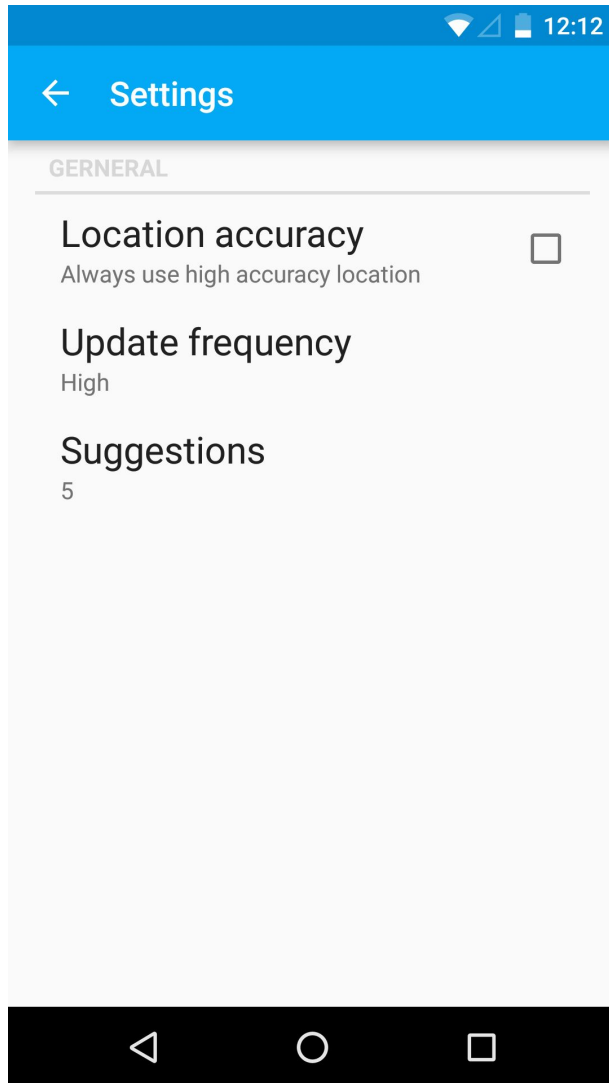

Select location for manual reminders

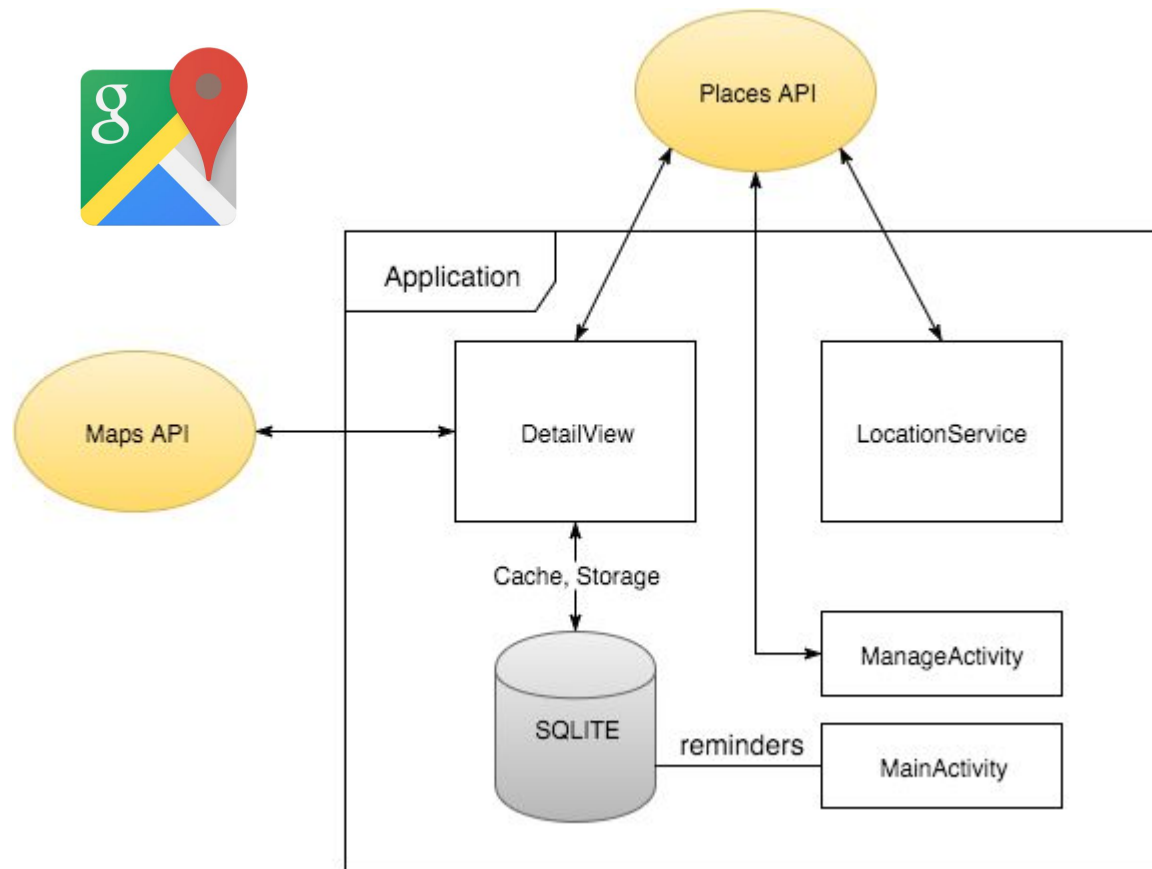

- Contains information about nearby places
- Places are displayed on the map
- Mark reminders as completed
- Edit, delete reminders

- Shows distance in meters
- Starts DetailActivity on click

- Location accuracy
- Update frequency
- Number of suggestions

Offline Challenge

- save reminders locally
- store downloaded information on device

Connectivity Challenge

- use location data from multiple sources
- use local information when internet connection is lost

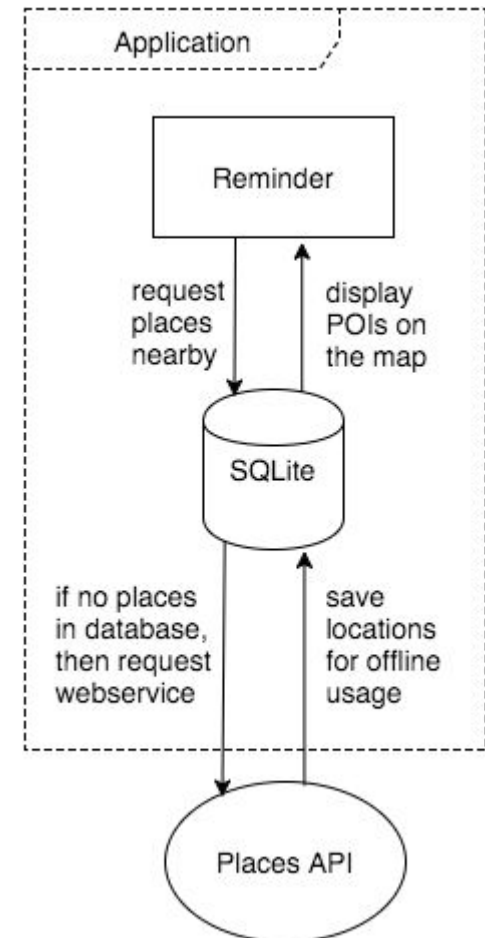

Energy Challenge

- limit update frequency
- let users choose location accuracy

Adapting access time

- Caching, Prefetching
 - save locations in the database
 - save POI-types locally
- **Effect:**
 - offline availability
 - reduced data usage
 - increased response time

Reducing data

- Filtering
 - select area radius of POIs near my location
 - select type of location
- **Effect:**
 - save data by only requesting relevant POIs (location and type)

Data transmission

- Adjusting protocol parameters
 - select update frequency
- **Effect:**
 - reduced number of API requests
 - avoid unnecessary requests via location change

Open Tasks

- improve User Interface
- add more settings (start service, radius)
- distance based request limiting
- responsive map in DetailView
