

# Application Development for Mobile and Ubiquitous Computing

## QR Gossip Final Presentation

---

Group 1  
Ashrafur Rahman  
Mumtahir Hasan Shafi

- Plan to Make An android QR Application Which can Transfer data Easily

- Collected Information For QR Based mobile Application To transfer Content and Found It's a Unique idea

- So started our Work To define User Cases for This Application

## Sound Profile

Ringtone  
Notification  
Media  
Alarm  
System  
Voice

## Clipboard

Plain Text  
Address  
Number

## Contacts

Read Contacts  
List Contacts  
Show Details

## Messages

Read Messages  
List Messages  
Show Details

## Use Cases

## Web Links

Long Web Links  
Clickable Hyperlink  
Clipboard Copy

## Help

Help Topic  
Function  
Description

## About

Application  
Information

## Scan

Unified Scan Function  
Scan Data Type  
Determined By  
Application Logic

## Development

- Android SDK
- Java SE
- Android Studio IDE

## Resources

- ZXing Library
- Android Audio Manager
- Media Store Image
- Content Provider
  - Contacts
  - SMS

## Permissions

- READ\_CONTACTS
- WRITE\_CONTACTS
- READ\_SMS
- WRITE\_EXTERNAL\_STORAGE

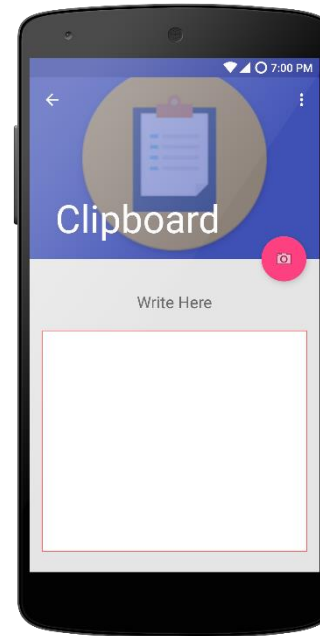

## Application Demo

Main Menu

Profile

Clipboard

Contacts

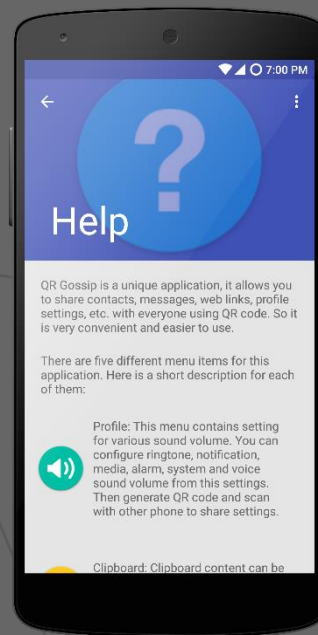

## Application Demo

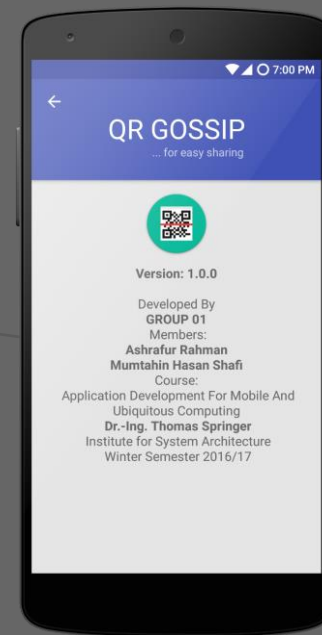

Messages

Web Links

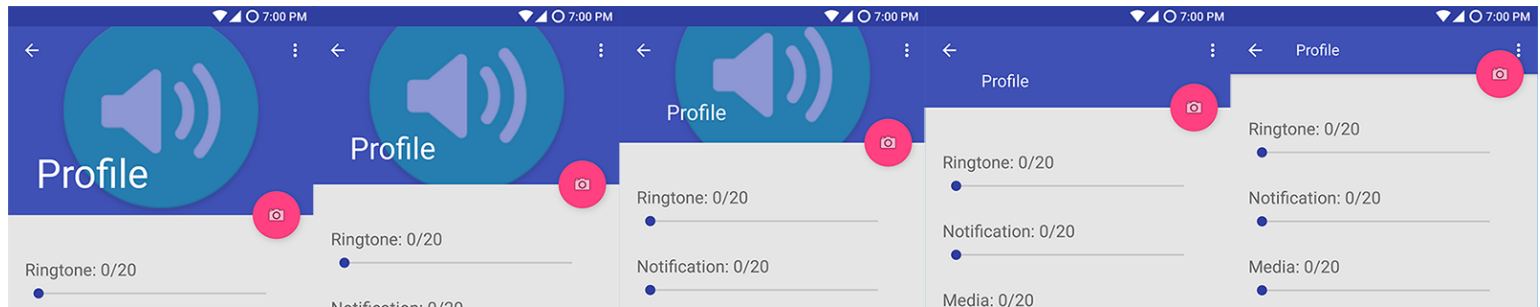

Help

About

Material Design Collapsing Toolbar Layout

Material Design Action Bar

Floating Button

## Challenges

## Usability Challenge

- Intuitive user experience
- Easy menu navigation
- Android material design with smooth menu animation
- Help menu for user convenience
- Detailed layout design
- Error handling
- Application icon for unique identity

## Form Factor Challenge

- Layout adapts to different resolutions and screen sizes
- Layout orientation for portrait and landscape mode
- Heterogeneity and limitation of resources for different sizes

## Context

Audio Manager provides access to volume and ringer mode control. But maximum and minimum value of audio is managed differently by different manufacturer. It is difficult to send same sound profile to different handset.

## Adaptation

- Maintained same sound profile for multiple devices

```
STREAM_NOTIFICATION,  
STREAM_ALARM,  
STREAM_MUSIC,  
STREAM_RING,  
STREAM_SYSTEM,  
STREAM_VOICE_CALL
```

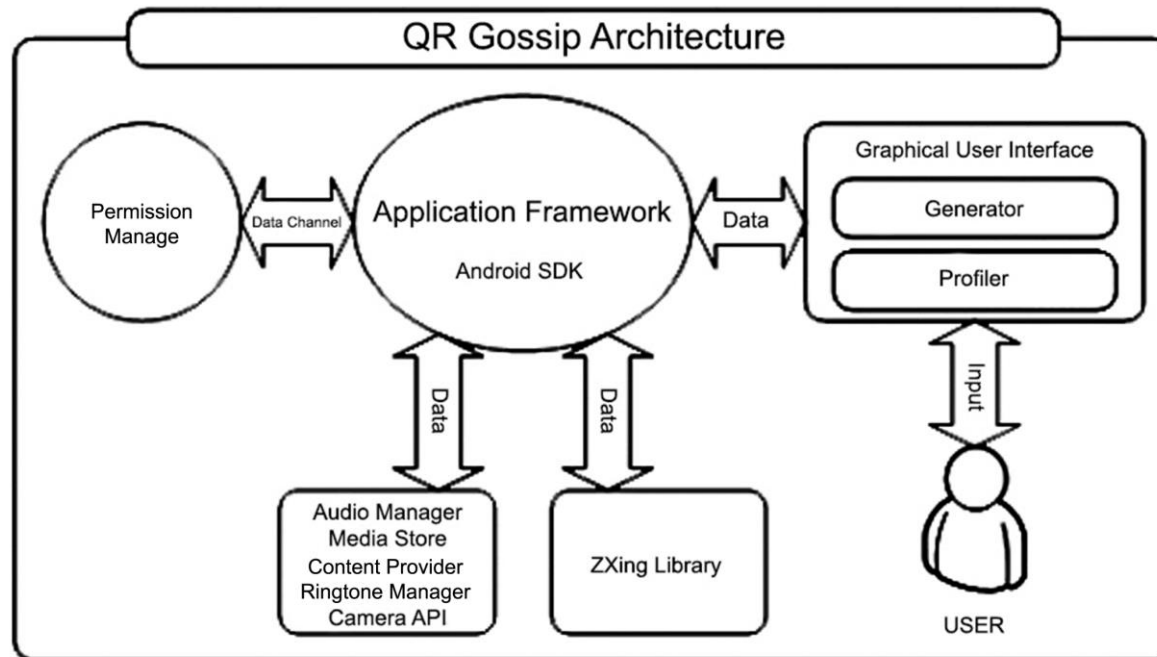

- Adapted internal logic to provide volume compatibility in different devices
- Multi level min/max range for different audio service

## Context

Most of the scanner application handle scanning operations in different window. Like different tab or drawer for different scanning context.

## Adaptation

- Unified scanning operation
- Provide floating menu for all scanning job
- Application logic will differentiate data
- According to scanned data, contextual operation will be provided
- User notification for executing task
- Pop up menu for further user interaction

## Complete Application Design

- This is our first android application design experience
- We are planning to upload this application in Google Play Store
- We maintained same design language in full application

## Android Permissions

To maintain security for the system and users, Android requires apps to request permission before the apps can use certain system data.

We learned how to ask for permission gracefully and Implement the requested permission.

## Things we learned

**Other Learning**

- Learned about use cases
- Implementation based on use cases
- Adaptation mechanism for different situation
- Application development with certain deadline

# Thank You
