

FOODSHIP GROUP UPDATE

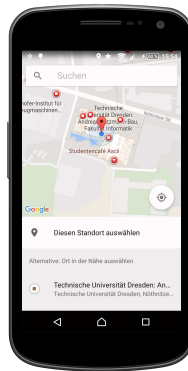

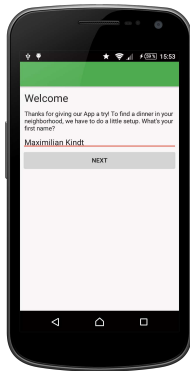

FoodShip, a foodsharing App

Sönke Huster & Hannes Hilbert

Dresden, 26. Januar 2017

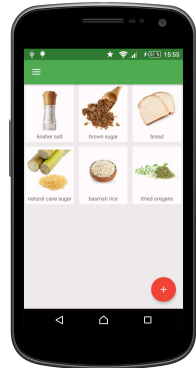

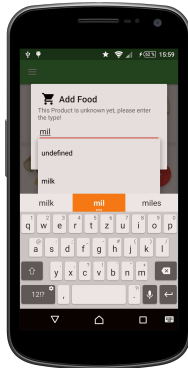

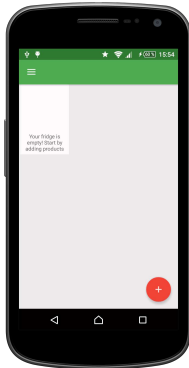

Login / Registration

- User enters Name and Location
- Offline Challenge: API-Calls are always cached and sent when server is reachable

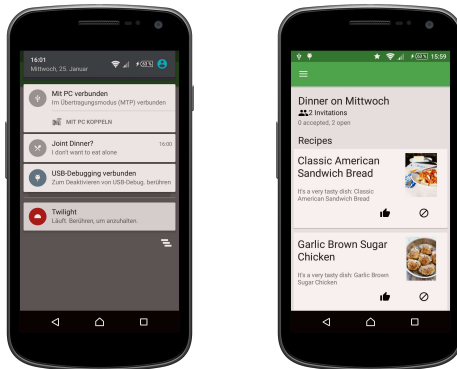

Digital Pantry

- Products are added to digital personal pantry
- API Feedback is emulated, when server is not reachable

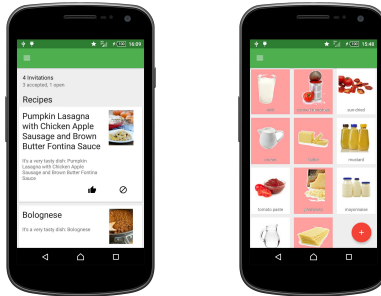

Notification & Group View

- Daily notification is sent to users in the same area
- User can accept or deny invitation
- User can vote recipes

Other Adaptation Concepts

- Location-Context: Find groups of people nearby
- Prefetching: App prefetches group information and recipe pictures after notification
- Ingredients as Context: Suggests recipes, that match a maximum of ingredients
- Data is persisted in internal storage and in cache for better user experience

Architecture & Technologies
