

SKIALP – Rent to win

An app designed in the lecture **APPLICATION DEVELOPMENT FOR MOBILE AND UBIQUITOUS COMPUTING**

App idea

- rent skiing equipment mobile
- Prepare your reservation on phone and get your fitting equipment on site
- find stores of our branch in your environment or search for them in a specific place

Challenges

Offline

Connectivity

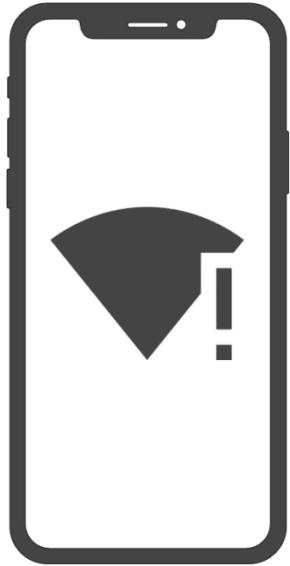

Usability

Offline Adaptation

- Context (*Personal*): personal informations
 - name, address, height, shoe size, head size, skill level
- Mechanism: delayed write-back
- Control: preparing reservation offline, caching until connectivity is given, send it to server

Connectivity Adaptation

- Context (*Technical*): Network
 - Connectivity type
- Mechanism: replacement
- Control: Getting Connectivity Status via ReactNative NetInfo, replacing pictures with text in catalog and store informations if connectivity is worse than 2G/3G

Connectivity Adaptation

- Context(*Personal*): personal informations
 - name, address, height, shoe size, head size, skill level
- Mechanism: app data → reduction → filtering
- Control: filtering articles in catalog (in advanced mode), filtering offers (stores) by matching equipment

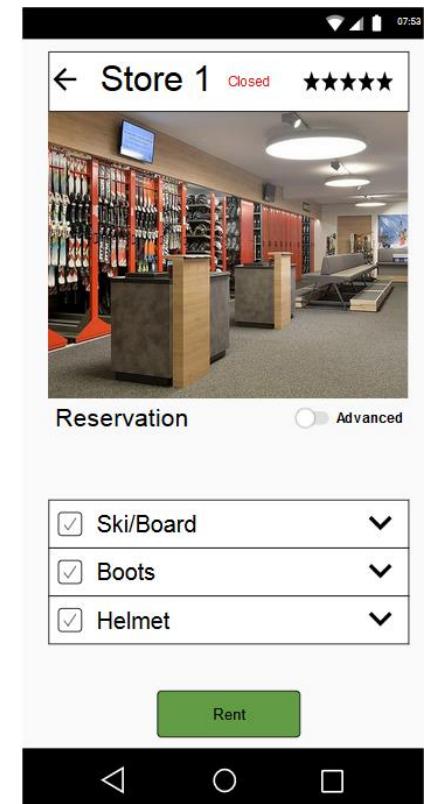

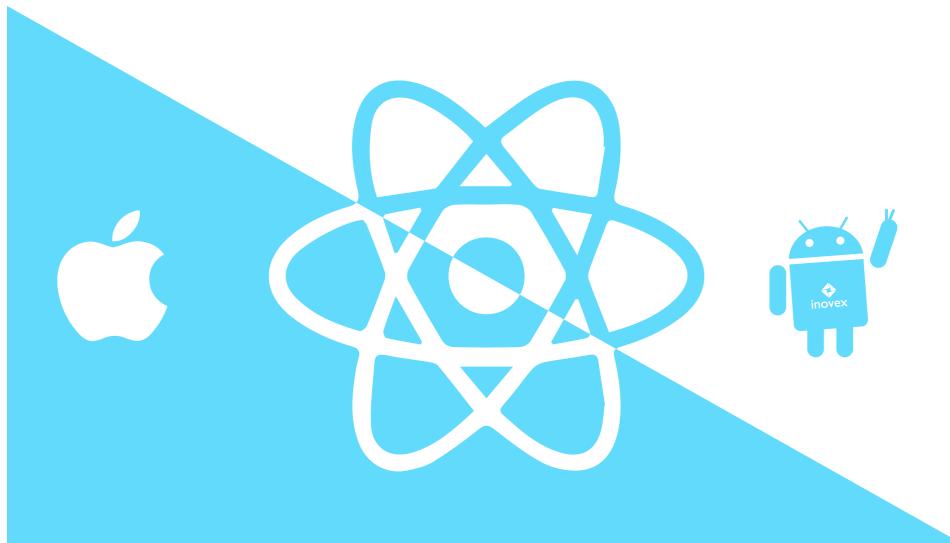

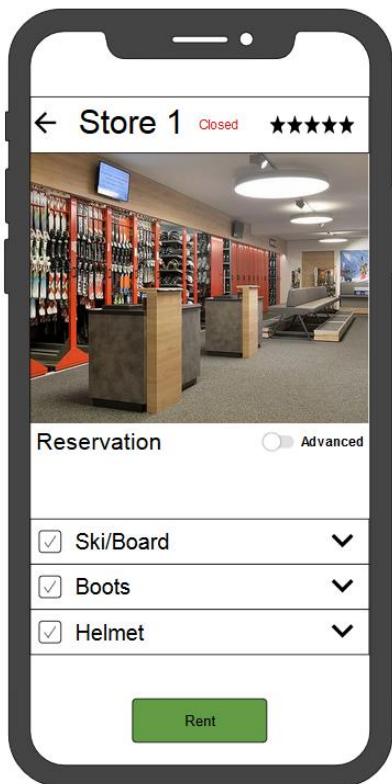

Usability Adaptation

- Context (*Physical, Personal*): Location
 - Getting user location via GPS
 - Getting personal informations from profile
- Mechanism: reduce user interactions
- Control: fast one/two-click reservation with prestored personal information, getting offers in location based area

Technologies

React Native

Concept from Mern stack tutorial

Schedule

- **November**
 - learning React
 - improving frontend design
 - elaborate data base design
- **December**
 - implementing core functionalities
- **January**
 - fixing bugs
 - adding remaining features

Thanks for your attention
